EDUCATION

San Diego State University — M.S. Bioengineering, 2026 | **GPA: 3.92**
Thesis: Carbon-Based Interdigitated Supercapacitor

- Fabricated carbon-based interdigitated supercapacitors using cleanroom microfabrication.
- Used spin coating, photolithography, mask alignment, thermal processing, and metal deposition.
- Characterized devices using Hirox microscopy, potentiostat testing, and electrochemical analysis.

University of California, Davis — B.S. Biological Systems Engineering, 2022

EXPERIENCE

California Safe Soils — Process Engineer | April, 2022 – July, 2024

- Supported electro-mechanical equipment troubleshooting and wiring documentation for industrial processing systems.
- Managed equipment assets, preventive maintenance, and production inventory to maintain manufacturing uptime.
- Automated Excel tools, and mass/energy balances for production and process control.
- Optimized manufacturing processes while supporting QC, equipment reliability, and process safety.

ENGINEERING PROJECT

BMES Prosthetic Ankle & Foot — Project Manager | June, 2025 – June, 2026

- Led prosthetic foot-and-ankle CAD development in SolidWorks.
- Performed FEA to evaluate structural performance and optimize foot rotation.
- Evaluated materials based on mechanical performance, manufacturability, and cost.

TECHNICAL SKILLS

Microfabrication: Cleanroom, Spin Coating, Photolithography, Mask Alignment, Tube Furnace, Metal Deposition
Testing: Potentiostat, Electrochemistry, Hirox Microscopy
Engineering: SolidWorks, CAD, FEA, COMSOL, MATLAB, P&IDs, Mass/Energy Balances
Manufacturing: GMP, DCS, ERP Systems, Process & Quality Testing | **EIT**
