EDUCATION

San Diego State University — M.S. Bioengineering, 2026 | GPA: 3.92
Thesis: Carbon-Based Interdigitated Supercapacitor

- Developed and optimized microfabrication processes for interdigitated supercapacitor devices.
- Fabricated devices using photolithography, spin coating, metal deposition, and Analyzed devices. quality and performance using microscopy and electrochemical testing.

University of California, Davis — B.S. Biological Systems Engineering, 2022

EXPERIENCE

California Safe Soils — Process Engineer | 2022–2024

- Developed and optimized manufacturing processes to improve product quality and repeatability.
- Troubleshooted equipment and interpreted wiring diagrams to support production uptime.
- Implemented preventive maintenance and managed equipment assets, spare parts, and inventory.
- Performed mass/energy balances, data analysis, and calculations for process improvement.
- Automated Excel tools for process calculations, data collection, and production control.

ENGINEERING PROJECTS

Intramedullary Rod — Medical Device Design

- Designed an intramedullary rod in SolidWorks and performed FEA to evaluate structural performance.
- Applied GD&T, materials analysis, and ISO concepts in a mock medical-device submission.

BMES Prosthetic Ankle & Foot — Project Manager

- Led SolidWorks design and FEA optimization of a prosthetic foot-and-ankle system.
- Coordinated design requirements, materials selection, schedules, and project deliverables.

TECHNICAL SKILLS

Manufacturing: Process Development, Root Cause Analysis, Continuous Improvement, QC
Engineering: SolidWorks, 3D CAD, FEA, COMSOL, MATLAB, GD&T, Engineering Drawings, P&IDs
Microfabrication: Cleanroom, Photolithography, Spin Coating, Metal Deposition, Thermal Processing
Equipment: Preventive Maintenance, Wiring Diagrams, Asset & Spare Parts Management
Software: Excel, Word, PowerPoint, Teams, Outlook, SharePoint, ERP Systems | EIT
